Navigate to www.luminaproducts.com, click LOGIN at the top right of the page. Click the red bar at the bottom of the drop down that appears "Coupon Code? Click Here to Register." Enter your code. You will be asked to register your information to establish your account. No need to ever do this again, you can now order at your discounted price whenever you are logged in.

**SAFER BURNING
THAN ETHANOL!**

NON-FLAMMABLE / SAFE HANDLING

English + French Label

SUPER•BIO•FUEL™ - A SUPERIOR FUEL THAT PROVIDES SUPER BENEFITS:

- **Non Flammable** for safe handling, yet Combustible for economic burning.
- **Most Cost Effective Ethanol Fuel Alternative** - burns longer than ethanol fuels.
- **Suitable for INDOOR or OUTDOOR use** - generates no harmful or toxic exhaust.
- **Less Heat Build Up** - flame at top of burner, minimizes heat gain of surrounding materials
- **Easy Shipping** - even by AIR, there are no DOT restrictions.
- **Planet Friendly** - it's sustainable and generates no harmful exhaust.
- **Clean Burning** - No Soot, No Smoke, No Toxins and No Residue.
- **Laboratory Tested** - and Certified for emissions and safety.
- **Made in the USA!**

SUPER•BIO•FUEL™ - The Revolutionary New Fuel for Ventless Fireplaces, Firepots, and Tabletop Fireplaces; it's uniquely NON FLAMMABLE (flash point 200° F) provides ultra-safe handling; but it is also COMBUSTIBLE and burns efficiently in devices that have special fiberglass batting to provide the necessary wicking action.

Due to its high flash point, SUPER•BIO•FUEL™ naturally prevents flash fires and flare ups. Pouring SUPER•BIO•FUEL™ into a burning fire only tends to put the fire out! And it's not hazardous, generating no harmful exhaust or odor. In fact, the only exhaust is small amounts of CO2 + Water Vapor (in similar amounts to human exhalation).

Other Important Features of SUPER•BIO•FUEL™

SUPER•BIO•FUEL™ is different than ethanol: (1) It does not attract water, and (2) fuel can be left in the burner and it will not evaporate. However, if used outdoors, it is important to keep water from getting into the burner...always keep covered when not in use and/or store burner indoors

SUPER•BIO•FUEL™ is not considered 'dangerous goods' by the Department of Transportation (DOT). Therefore no special requirements or restrictions when shipping. The 4-Liter bottles are much less costly to ship than hazardous flammable fuels. It can even be shipped by air, and is suitable for transport by all common carriers, couriers, and the United States Postal Service.

SUPER•BIO•FUEL™ burns longer than other fuels; it's the consumers' most economical fuel choice.

- Available in convenient, economy sized 4-Liter bottles, packed 4 per carton.
- Safer and cleaner to burn than ethanol or petroleum based fuels and is eco-friendly.

SUPER•BIO•FUEL™ has no special storage requirements. It's rated non-flammable and should not impact facility insurance coverage unlike other more dangerous flammable fuels. Of course, always store in a cool place, away from any source of heat or ignition, out of direct sunlight and out of the reach of children.

SUPER•BIO•FUEL™ Is Proudly made in the USA!

SUPER - SAFE ...virtually eliminates chance of accidental misuse.

SUPER - ECONOMICAL

SUPER - GREEN ...sustainable and earth friendly.

SUPER•BIO•FUEL™ IS FUEL REDEFINED!
